URBAN, LOW EMISSION, CLIMATE RESILIENT DEVELOPMENT

Building a coherent, integrated approach
2017-2021

Funded by the European Union

Implemented by:

ICLEI
Local Governments for Sustainability

UN-HABITAT
FOR A BETTER URBAN FUTURE
URBAN-LEDS PHASE II: EXPANDING GEOGRAPHY, INCREASING IMPACT

Human activities in cities, towns and regions contribute a significant and growing proportion of global greenhouse gas emissions and are at increasing risks from the impacts of climate change. They also drive the demand for energy and other services in urban areas with rapid population growth. UN-Habitat and ICLEI are taking on these challenges by accelerating urban low emission development and climate change resilience in more than 60 cities worldwide, by exploring a multilevel and integrated governance approach to urban climate action.

An Urban Low Emission Development Strategy (Urban LEDS) is integrated into city development plans and processes to outline a pathway to transition a city to a low emission, green and inclusive urban economy.

Urban-LEDS strengthens cooperation and information sharing across all levels of government, positioning them to jointly plan, advance, track and deliver on global climate and sustainability goals.

Through the Urban-LEDS project, local governments develop comprehensive Urban Low Emissions Development Strategies (LEDS) and create integrated climate action plans. These are aligned with the Global Covenant of Mayors for Climate & Energy (GCoM) framework. They set targets, implement policies, programs and projects.
# THE URBAN-LEDS APPROACH: ACTIVITIES AND IMPACTS

## Benefits to local governments

### ANALYSIS
- Obtain an overview of greenhouse gas emissions (GHG inventories)
- Identify climate risks and vulnerabilities (CRVA)
- Understand institutional context and opportunities for improvements (governance)

### ACTION
- Develop the action plan and implement policies
- Ensure the plan is mainstreamed in all sectors across the municipality
- Engage with stakeholders and build strong coalition for implementation

### INTEGRATED REPORTING
- Report climate and emissions data, action implementation, and access to finance
- Track progress to assess gaps and opportunities
- Ensure reporting to appropriate actors: Council, government, public, global platform

### CAPACITY BUILDING
- Training on process, policy, and technical implementation, building skillsets of leaders and officials
- Sharing good practices, resources, and tools

## Benefits to national governments

Promoting and enhancing **MULTILEVEL GOVERNANCE** to deliver on national development goals, and to raise the ambition of Nationally Determined Contributions (NDCs) and National Adaptation Plans (NAPs)

Supporting the hosting of national **TALANOA DIALOGUES** and exchanges to enhance collaboration and coordination among different climate actors

## Global benefits

**SUPPORTING** the Paris Agreement, the New Urban Agenda and Sustainable Development Goals

Supporting the implementation of the **GLOBAL COVENANT OF MAYORS FOR CLIMATE & ENERGY (GCoM)**

Informing **GLOBAL CLIMATE CHANGE DECISION MAKING PROCESSES** with good quality data and lessons learned from Talanoa Dialogues
URBAN-LEDS PHASE II: PROJECT GOALS

- 55 Signatories to the Global Covenant of Mayors for Climate & Energy
- 60 Cities and towns in 12 countries
- 447 Reported climate actions
- 334 mitigation actions
- 113 adaptation actions
- 16 Transformative Actions Program
- 16 New project applications to the TAP (Transformative Actions Program)
- 20+ Peer to peer learning exchanges involving local & national government staff
- 60+ Pilot projects implemented
- 79 MtCO₂e (community) reported in cCR
- 30 community GHG inventories reported
- 8 Climate commitments
- 5.9 MtCO₂e estimated emissions reduction
- 8 New Urban Low Emission Development Strategies being elaborated
- 8 Low Emission Development Strategies finalized
- 8 Implementation projects in the TAP pipeline to date

URBAN-LEDS PHASE I: WHAT WE ACCOMPLISHED

- 44 Million people represented
- 37 Cities in 12 countries
- 16 climate risk & vulnerability assessments completed
- 60 Cities and towns in 8 project countries and Europe
- 5.9 MtCO₂e estimated emissions reduction
- 8 Million people represented
- 37 Cities
- 12 countries
- 8 New Urban Low Emission Development Strategies finalized
- 20+ Pilot projects implemented
- 79 MtCO₂e (community) reported in cCR
- 30 community GHG inventories reported
- 58 Climate commitments
- 8 New Urban Low Emission Development Strategies being elaborated
- 8 Implementation projects in the TAP pipeline to date
